Dear Jeff,

In response to your request, we started using the ChannalBAC cushions at the end of 2007, and after the first week we knew we had something.

This is a very rugged cushion and will take a pretty good wrap on the cylinder without hurting the cushion, and will rebound right away. When applying the plate to the cushion, it seems to attach itself to the cushion eliminating any possibility of smut due to the fact that the plate seem to be sucked down onto the cushion and will not move once applied.

The print reproduction is also very good holding all the highlight dots and laying down a good solid black also. The cost scared us until we realized just how long the cushion lasts. We see no problem with the cushion and should get at least another year and a half to two more years out of the cushions, making it a cost effective move.

Sincerely,

Tom Bright
